Product Model #: IDC-100

Product Name: Slate Roof Clip

PERSPECTIVES

FOR USE ON	
•	Slate
•	Synthetic Shakes
•	Wood Shakes
	Membranes
	Other

DESCRIPTION:
The Slate Roof Clip is an essential device used for mounting heat cables on slate roofs. They work without the use of nails, screws or adhesives. Installation is simple. Just slide the clip under the slate tile and hook one of the nailing slots onto a fastener that is in place to secure the roofing. Each clip is made of robust 20 gauge copper sheet metal and measures 2"x 16". Notice the 300 mm distance between the last fastener slot and the first cable prong. This distance determines the longest roofing exposure this clip can work on. Slate roof clips normally work on slate or wood shake roofs with 10" exposures, assuming the fastener location is not more than 40 mm (1 1/2") above the butt edge of the slate/shake.
